

THE BLUE FLAME/DANTE LOG LIGHTING SYSTEM

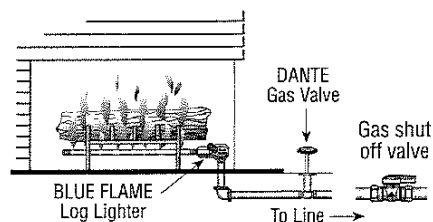

Installing a Blue Flame/Dante Log Lighting System eliminates smoldering and smoking logs and kindling that pollute the air!

KEY ADVANTAGES

- Encourages usage of wood burning fireplaces as logs ignite quickly, effortlessly, without messy kindling.
- The Dante Valve is the only valve in the industry machined out of solid brass bar stock, which completely eliminates porosity problems found in sand casting type valves.
- Readily and inexpensively installed in custom fireplaces and in pre-fabricated fireplaces. (Majestic, Heatilator, Martin, Preway, etc. all have a punch-out to accept the BLUE FLAME LOG LIGHTER.
- Makes it possible for anyone to easily start and maintain a crackling log fire.
- Features an exclusive air-gas mixing chamber that minimizes the amount of gas required to obtain a hot blue flame (Energy conserving).
- Is engineered for carefree enjoyment. Over 4 million safety in use in the U.S. and Canada.
- Designed to quickly draw smoke up the chimney, thus, stopping smoke from entering the room.
- Available for usage with natural gas or LPG (Please specify).
- Patented STEM EXTENDER simplifies installation or modification.

- 1 The brass or chrome key is removable insuring you that the valve will not be turned on accidentally.
- 2 The floor plate, in a brass or a chrome finish, blends with any decor to guarantee an attractive appearance.
- 3 The DANTE VALVE has 4" of installation variation. If additional adjustment is required, the optional STEM EXTENDER may be ordered to allow for any modifications.
- 4 The deluxe A.G.A. certified valve is available in straight (Model "S") or the angle (Model "A") pattern. This patented valve is engineered for SAFE, worry-free service and is designed for easy installation in the wall or the floor.
- 5 The (patented) original BLUE FLAME LOG LIGHTER is available in the straight (Model "S"), the angle (Model "A") or the T (Model "T") pattern. All patterns are available for natural gas or LPG (specify requirements).
- 6 The exclusive air-gas mixing chamber creates a true venturi establishing a 67% hotter flame. The mixing chamber shutter easily adjusts the flame from golden radiant to hot blue.
- 7 The 15 jet burner holes allow the flame to spread over the logs, quickly and evenly igniting them.
